

THE FUTURE OF WORK

The Future of Work report, researched and produced by Arup, explores how technology will shape our jobs, with collaboration and sustainability at the core.

65% of workers expect employers to play a vital role in solving societal issues such as climate change and inequality.

28% would take a 10% pay cut to work for an employer that was committed to helping solve societal issues.

74% believe that as tech improves and automates tasks, employers need to empower workers to achieve better work life balance.

Yet workers are still sceptical of their employers intentions.

65% think employers will use automated technology to increase profits and cut jobs.

With this in mind, **63%** want employers to harness the profitability gains from automation technology and reinvest in people and community.

Collaboration

is key to tackling the big issues that we are grappling with in modern society. Those employers that use technology benefits as a force for good will thrive and attract the best talent.
